

SLIDE TRUCK 3RD GENERATION

After several months of development and testing, we are very proud to announce the 3rd generation of our surf skate truck: tighter turns, easier set-up and increased durability are the keypoints of our new product.

EXTRA HEIGHT

- Less rising pads: Screws suffer less stress and last longer.
- Tighter turns: Less wheelbite.

SECURITY NUTS & SYMMETRICAL SPRING

- All 4 screws have their own self-locking nut to set up the truck to the board.
- The inside spring has become symmetrical to make the assembly easier.

IF IT WORKS, WHY CHANGE IT?

We have kept the same as many features as possible:

- Truck width (230mm).
- Spring tension adjusting nut.
- 6 holes to set up the truck to any Slide deck.
